

Overview

The computing innovation of AI impacts our lives in ways that require considerable study and reflection to fully understand them. In the beginning of the course, you were instructed to choose a final project topic of the “Impact of AI” in your field of study or area of interest . In this final project assignment, you will use the skills that you've learned during the course to create a website and presentation that examine your topic with a critical lens to demonstrate a deep understanding of the innovation in your topic area, its development, its functionality, and its impact or potential for impact on people and society.

Successful narratives will exhibit evidence of critical thinking supported by research (not just descriptive or based on opinion/uncertain beliefs).

Several assignments throughout the semester will contribute digital artifacts for use in your project, including graphics, video, data visualizations, answering question prompts, and making a website.

There are two parts required for the project:

1. Website
2. Presentation

Assignment Preparation

Make a copy of this document to record your answers. Rename your copy of the document to **lastname_final**, where **lastname** is your last name. You will **place all answers and screenshots** in this Google Document. The steps below will tell you what to put in your answer document - use the spaces provided to insert your answers accordingly.

Part 1: Website

During the course you were asked to create a Google Site with specific requirements as to what must be included. For your final website, you will add content to your Home page, Impact page, and Survey page as instructed below. You will also add a new References page.

Home Page (see [example](#))

This page should already include (from a previous assignment):

- ☐ Your logo
- ☐ A banner image and title/author
- ☐ Your AI generated image
- ☐ Your elevator pitch

In addition to this, place the following prompts (including their letter labels A, B) and your responses to them (no single prompt response should be more than 200 words).

- A. **Background and Context:** Describe the AI technologies that are currently being used in your chosen topic area. What problems do they solve, and what opportunities do they create? Briefly explain how AI has developed in this field.
- B. **CS Connections:** How do other computer science areas (Cybersecurity, Data Science, Programming, and The Internet) relate to AI in your chosen topic area? How do these areas support or limit AI use?

→ Add additional images/video to support your answers

“Impact” page (see example)

This page should already include (from a previous assignment):

- ☐ Embedded video
- ☐ Text description of video’s relevance to topic

In addition to this, place the following prompts (including their letter labels C, D, E) and your responses to them:

- C. **Benefits and Concerns:** What are the main benefits of using AI in your chosen field? What are the main concerns or risks? Give specific examples of both.
- D. **Impact on Society:** How is AI in your chosen topic area affecting society, the economy, and/or culture? Consider the effect on jobs, accessibility and equity, social interactions, cultural practices, and/or the economic opportunities and disruptions that may emerge.
- E. **Future Outlook:** Based on your research and analysis, what do you predict for the future of AI in your topic area over the next 5-10 years. What advice would you give to people in this field about using AI?

→ Add an image of your Impact of AI infographic (created in a previous assignment).

“Survey” page (see example)

This page should already include (from a previous assignment):

- ☐ Embedded survey

- ☐ Text description of survey's relevance

In addition to this, add the following:

- An image of the chart that you generated from the answers to your survey (from a previous assignment).
- Add a sentence referring to the chart's relevance to your topic.

“References” page (see example)

Add a new page called “References”. Place the following prompt (including its label F) and your response to it:

- F. **Ethics Statement:** Describe how you used AI tools to complete your final project website (consider both research and content creation). In your description, address each of the AI ethics principles including transparency, attribution, responsibility, and authenticity. Provide specific examples to support your statement.

AI Ethics Questions to consider in your statement:

- **Transparency:** Did you clearly identify when and how you used AI tools in your research?
- **Attribution:** How did you give proper credit for any AI-generated content or AI-assisted work?
- **Responsibility:** How did you verify the accuracy of AI-generated information and take responsibility for your final work?
- **Authenticity:** How did you ensure your project reflects your own understanding and analysis, even when using AI assistance?

- List at least three references used in your research, more are encouraged. Each source must be a reliable article, book, news, or other accessible online source. For each reference include:
 - Author
 - Title
 - Website address (as a hyperlink)
 - Year of publication (if there is no published date, use the access date)

Google Website

→ Provide the URL of your updated Google site.

---------------	--

Part 2: Presentation

You will present your computing innovation project by taking the audience on a tour of your website. Do not simply read the website. Have notes that you use while speaking to make the main points from each of the question prompts A-F. Your presentation will also describe some of the technology that you used to create your website and graphics.

Format:

Your instructor will provide guidance on the format of your final project presentation (in-person or video presentation). For online sections, you will be instructed to create a video presentation.

Requirements:

- The presentation must be 5-8 minutes.
- Briefly describe how you created your website using Google Sites. Explain how your Google Site is stored, edited, and accessed on the web.
- Briefly describe the graphics and videos used, including the tools and techniques used to create them or how you utilized search to find them.
- Go through each question A-F, by going to each page of your website. For each question, state the question and summarize the points in your response.
- On your “Survey” page, explain how you used Google Forms and Google Sheets to collect and analyze data.
- On your “References” page (in addition to discussing the prompt), follow a link on the page to your most useful web-based source to show the audience where you got the information from.

Follow the steps below for video presentation ONLY:

For video presentations, we recommend using [ClipChamp](#) to capture your video. The free version produces only 480p (low resolution) videos, which is sufficient for this assignment. You

may also use a different video capture/editing software application of your choosing (like iMovie or ShotCut).

- Create your video and upload it to your Google Drive (or Youtube if you prefer) to obtain a URL for submission.
 - You will need a microphone for your computer to record your voice (most laptops have a built-in microphone, or you may purchase an external microphone to use).
- Provide the URL of your video presentation on Youtube.
